

Mole & Gopher Repeller with Solar Assist

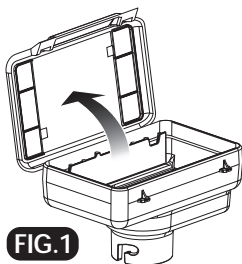

HOW IT WORKS

The Mole & Gopher repeller repels moles, gophers, shrews, ground squirrels, voles and pocket gophers from your lawn or garden areas. The unit installs easily into existing holes or mounds. The generating unit produces complex sounds, that are directed down the tube into the rodents tunnel. The sounds impact the rodents nervous system, driving them away. The unit features a built-in solar panel that assists the batteries to dramatically prolong battery life. The unit is weather resistant and designed to withstand normal exposure to rain, snow, and sprinkler systems; however, do not directly expose unit to standing water.

INSTALLATION AND USE

The Mole & Gopher repelling system includes a generating unit with solar panel, one solid tube and one flexible tube.

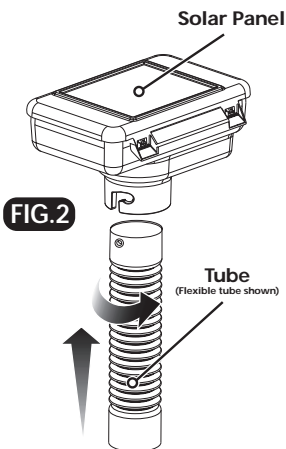

1. To open the top cover pull out and up on lip located on the front of the cover to release the front clips and open the unit. **(FIG. 1)**

2. Insert 4 "D" cell batteries as indicated by the positive and negative symbols inside the unit. The unit is operational once the batteries are inserted. The unit will cycle on and off automatically every four to five seconds.

3. Replace top cover by pushing down the cover over the clips until it snaps in place.

4. Insert the tube (flexible or solid) into unit by lining up the groove in the base of the unit with the tab on the tube. Rotate the tube to the right until it locks in place. **(FIG. 2)**

5. Excavate rodent tunnel with a small shovel or rigid tube to clear it from dirt and debris.

6. Insert tube end of the unit into the hole or tunnel, letting the main unit rest on top of the soil. The flexible tube is designed to conform to irregularities and bends in the tunnel, and can be extended up to 13 inches. The solid tube is rigid and stays firmly where placed.

7. Relocate your Mole and Gopher Repeller periodically to keep pests from returning.

BUILT-IN SOLAR PANEL

The built-in solar panel is constructed of glass and can be damaged. Take caution not to push directly down on the solar panel during installation as it is possible for it to break and cause injury. It is recommended to remove the unit from the ground when mowing over it.

ENERGY CONSUMPTION

The unit is specially designed to be powered by 4 "D" cell alkaline batteries which are assisted by the solar panel to prolong battery life. The batteries typically last up to 8 months.

NO CHEMICALS, POISONS OR TRAPS

No chemicals go into the soil or onto the lawn. Unit does not affect humans, unborn children or non-rodent pets such as dogs, cats birds and reptiles.

LIMITED WARRANTY

This MOLE & GOPHER REPELLER is guaranteed against defects in material and workmanship for six months from date of purchase. Bird-X will replace or repair, provided defect occurs under normal use. Units also carry a 30-day performance guarantee. If user is not satisfied with results, unit may be returned within 30 days for credit less a 15% handling and restocking charge. *Returns accepted only with authorization from our Chicago office.*
